

SUCCESS STORIES & STUDENT FEEDBACK

Enrolling in our online program helped Jack get the high paying job he wanted!

I wanted to get into operations, so I enrolled in a community college near me. It was so hard to go to college with a full time day job- it was not working for me at all.

When I heard about this Oil Refinery Operations program and realized it was the right solution for me. **I worked the entire time I was taking this program and set my own schedule because it was completely online.**

After graduating from this program, I got a job as an operator after I graduated from this program, and I couldn't be happier with the progress I have made.

The skills I learned from this program are extremely valuable and I use them regularly on the job now. I learned how to read P&IDs in this program and now I read them all the time at work.

I also used the program material to prepare for interviews.

My only regret is that I didn't do this sooner!

**Jack Sherman,
Oil Refinery Operations**

Leslie got multiple job offers after taking our program!

I have worked in the oil patch for some time and eventually decided that I too wanted to upgrade to a high paying job with long term prospects. I heard of operator job openings & applied but had no success. The problem was that I didn't have the right qualifications.

The answer for me was taking this Oil Refinery Operations program online- I got the qualifications I needed without quitting my job. **Employers started responding to my applications after I took the program. Not only did I add the necessary certification to my resume by taking this program, I built a solid understanding of complex subjects like distillation & fractionation.**

Leslie Jones Jr,
Oil Refinery Operations

I still use the course material to refresh my memory & am grateful to Houston Industrial Training for supporting me in my journey throughout.

My biggest dilemma these days is deciding which offer to pick!

The course content was easy to understand and I especially liked being able to do the course at my own pace. I am a working dad and I needed education that fits my schedule, not the other way round. The simulations helped me understand the course material and how equipment actually works.

I had a number of opportunities to understand the course content. The institute was very generous with the amount of access they provided me to do the course. I was able to review the content as many times as I needed, until I was able to master it!

**Kristoffer Van Haste,
Oil Refinery Operations**

I wanted to get a high paying job that will last so I tried getting one at the industrial plants near me. It was tough getting even a callback without the necessary qualifications. But getting the right qualifications was tough too- I had a full time job which I couldn't quit for school. Eventually I found this program and knew it would work for me.

I took the Chemical Plant Operations program and I **didn't just get the right qualifications, I learned a lot of great technical material through the program.** The images and graphics used in the modules were great teaching aids- after studying the modules, I felt that I really understood how a chemical plant works and felt ready to get a job in one.

I was able to access modules as many times as I needed to study at my own pace.

Taking this program online was a great way to get the qualifications and knowledge I needed to get my foot in the door at the industrial plants near met.

And low & behold, I started getting call backs to my applications after graduating from this program!

**Blane Northcutt,
Chemical Plant Operations**

I already have a degree in Geology, but needed some hardcore technical knowledge to apply for jobs in Natural Gas Plants as a pressure technician. This course helped prepare me for just that!

The program is easy to understand and the simulations were very helpful. I felt that the course material was laid out to help the student get the most out of the content- the course started with safety and steadily increased in technical content.

Brian Campbell,
Natural Gas Plant Operations

I was a car salesman, looking to expand my horizons. **There is a power plant in my town and I wanted to get a high paying job there. I took the Power Plant Operations course while working full time as a car salesman.** The course was very well laid out and I really understood the technical material well, thanks to the graphics and simulations used throughout.

I am in the process of doing interviews now and looking forward to starting a new and exciting chapter, thanks to this qualification!

Joshua Banks,
Power Plant Operations

I was working in Distribution & Logistics at a beverage company when a friend who works at Chevron referred this Oil Refinery Operations program to me. **I wanted a high paying job and this program was perfect to get the qualifications I needed.**

I enrolled in the course while working full time throughout. I had limited technical knowledge, such as the ability to read P&IDs, before taking the course but I learned all about them through the program material. The course is very well laid out and the simulations & graphics are very helpful.

Andrew Ortega,
Oil Refinery Operations

I was looking for employment in an onshore plant and wanted to create a solid foundation by learning about oil refinery operations. I contacted the local university and they referred me to this course- it was online and I could work fulltime while getting the qualification I needed.

I worked offshore throughout the duration of this course, but with the course being completely online and the student support being so robust, I had no issues keeping both my work and education going simultaneously.

The course was pretty great- I had worked in the industry previously but I hadn't learned the ins and outs of operating a plant like this before. Taking this program and getting a solid qualification has added the missing element to my resume and made me confident in my ability to be a refinery operator!

Jose Lara,
Oil Refinery Operations

I needed to get a meaningful qualification that I could use to get a high paying job, but it was proving very hard with my lifestyle. I was working 12 hour shifts, 7 days a week, away from home and it seemed impossible to get any industrial training, without quitting my job. While trying to find a college or university that could offer me Industry-Ready training, I found this Oil Refinery Operations course. I enrolled and found that the course worked very well with my schedule. I would study after my shifts and move things around as I needed to. I learned a ton of practical knowledge while taking the course- it was nicely laid out and easy to understand.

I would highly recommend this program to anyone who is trying to increase their chances of getting a high paying job without putting their entire life on hold in the process!

Reynaldo Moya,
Oil Refinery Operations
